

# VIRTUAL GEOLOGICAL WORLD (SCHOOLS)

---

Explore the landscape. As in real life rivers should be crossed at bridges.

At your disposal is a GPS Handset (G) and Compass (C) to help you navigate.

Click on outcrops to see the field notebook; you need to be close to the outcrop for interaction.

Record the data in pencil onto the field map - you will need to interpret as you go.

Just as in the field, you need to plan your route between outcrops to accurately complete the map

---

## INSTRUCTIONS

---

**Arrow Keys** or **WASD** keys - to control movement

**Mouse** - to control head ( where you are looking at ). **X** to re-centre the mouse pointer.

**Space Bar** - Jump

**G** - Toggle GPS on / off
