

VIRTUAL GEOLOGICAL WORLD (SCHOOLS)

Explore the landscape. As in real life rivers should be crossed at bridges.

At your disposal is a GPS Handset (G) and Compass (C) to help you navigate.

Click on outcrops to see the field notebook; you need to be close to the outcrop for interaction.

Record the data in pencil onto the field map - you will need to interpret as you go.

Just as in the field, you need to plan your route between outcrops to accurately complete the map

INSTRUCTIONS

Arrow Keys or **WASD** keys - to control movement

Mouse - to control head (where you are looking at). **X** to re-centre the mouse pointer.

Space Bar - Jump

G - Toggle GPS on / off

C - Toggle Compass on / off

Click on Outcrops when nearby to get field notebook. The notebook can be dragged around the screen

T – toggle between 3D world and field map

Ctrl - Esc – to exit
